⁽³⁾ The specified measuring- / switch ranges are valid for water having a density of 1.00 kg/dm³, vertical installation of the device and flow direction from bottom to top.

Other installation positions or deviation from the operating densities will increase the measurement error specified in the data sheet.

Operating density for water at 20 °C and 1.013 bar (absolute value): 1.00 kg/dm³.

Upon request, special scales for deviating media and different operating conditions are available.

Special scales for air see pages 6 and 7

Special scales for HCl 30 - 33 %, NaOH 30 % and NaOH 50 % see page 7

■ LIMIT SWITCH CONTACT ZNC AND ZNO

■ APPLICATION

The limit switch contacts are used to monitor flow limits. They are slid onto the guide located on the flowmeter and can be set to any value of the corresponding scale.

■ ILLUSTRATION

■ OPERATION

A built-in magnet in the float closes or opens a Reed contact encapsulated in the switch housing. The switching function is bistable, that is, the switching state is maintained, even when the magnetic float is away from the contact.

■ SWITCHING STATE

Contact		Float (above)	Float (below)
ZNC	(Normally closed) / MIN	open	closed
ZNO	(Normally open) / MAX	closed	open
